

# engine benchmark results

Since 2023-08-28 until 2023-09-11

**Score** represents the amount of milliseconds it takes for one iteration of the benchmark to finish. The smaller the score, the better.

Note that only successful benchmark jobs are processed, so if there is a gap in the chart, it might be caused by failing jobs during that time period.

Hovering over some point in a graph displays score, score diff (difference with the previous score value) and date in a tooltip. You can click on a particular point in the graph to display some additional information under the graph like a link to PR, a commit message, commit author, etc.

The charts can be zoomed in by `dragToZoom` which means that you can left-click on the chart, hold it, and release it to zoom into a rectangular area. Then right-clicking to reset to the original zoom. See `explorer` configuration options in <https://developers.google.com/chart/interactive/docs/gallery/linechart#configuration-options>.

Generated by the `bench_download.py` script.
