Title Youth Mental Health Variables Modelling Toolkit

Version 0.0.0.9017

Description Classes that describe the structural properties of variables
commonly present in youth mental health datasets and some (where
freely available) related scoring algorithms. The main motivation for
this package is to enable data integrity tools that ensure that
methods are applied to the appropriate data structures. This
development version of the youthvars package has been made available
as part of the process of testing and documenting the package. The
tools contained in this development release automate a number of tasks
which MODIFY THE DIRECTORY STRUCTURE OF YOUR LOCAL MACHINE. Therefore
you should only trial this software if you feel confident that you
understand what it does and have created a sandpit area in which you
can safely undertake testing. If you have any questions, please
contact the authors (matthew.hamilton@orygen.org.au). The
documentation for this package has been automatically generated by the
ready4fun package and is therefore quite rudimentary. Human authored
documentation will follow in 2021.
